

**Amendments to the Specification:**

Please replace the paragraph beginning at page 23, after line 20, please insert the following paragraph:

While a multi-drawer cabinet has been illustrated as a preferred embodiment, it is also contemplated that a single drawer cabinet kit could be constructed as another embodiment. The single drawer would be supported on the upper surface of a base panel 100. Side panels 300, 400 and back panel 500 would be attached to the base panel. A top panel 200 would be attached to the side and back panels 300, 400 and 500. The lower rollers 720 on the drawer provide a means to enable the drawer to be readily slid into and pulled out from the cabinet kit. Rollers 710 and stops 722, mounted on the upper rear portion of the drawer cooperate with the lower portion of drawer guides 600 to enable the drawer to be slid out from and into the cabinet. The stops cooperated with the stop tabs 620 on the guides to prevent the drawer from being extended completely out of the cabinet and prevent tipping and canting of the drawer.
